Ten Deaths a Day

I can't think of a better time to be a teenager than summertime, when life is full of carefree days, part-time jobs and fun times with friends. Summer is not a time teens should have to worry about their safety.

But parents, please pay attention, because when it comes to teen driving, the period between Memorial Day and Labor Day is known as the 100 Deadliest Days. During this period in 2016, 1,050 people were killed in crashes involving a teen driver.

Car crashes are one of the leading causes of death for teenagers, in part because teenagers crash cars at three times the rate of more experienced drivers. During the 100 Deadliest Days in 2016, more than ten teenage lives were lost each and every day because the teens were involved in a texting and driving collision.

We can't let this happen again and we need your help to keep our teens safe.

The National Safety Council attributes teen crashes to the following causes.

- Summer driving tends to be more recreational than purposeful.
- Teens frequently have friends with them while they're driving, which increases the risk of a fatal accident by 44 percent.
- Teenagers stay out later at night, increasing the risk of being involved in a collision.
- With warm weather and clearer conditions, teens tend to speed more often.
- 80 percent of teens admit to texting while driving.

Sadly, texting has become so ingrained with younger people, research shows they feel obligated to send and read text messages, even while driving. It appears texting while driving is no longer a just a trend; it has become a national epidemic.

Drivers assume they can handle texting while driving and remain safe, but the numbers prove otherwise. Here are the facts about texting while driving:

- Texting makes you 23 times more likely to be in a collision;
- Reading a single text message is the same as driving with your eyes closed for five seconds at 60 mph; and
- More than 100,000 people a year are injured or killed as a result of a collision involving texting.

Ten Deaths a Day (cont.)

To fully understand the cost of texting, consider the horrific collisions they cause. Please allow me to recommend a ten-minute video for you to watch with your teenage driver. I really believe this video will have a bigger impact on your teenager's safety than all the statistics in the world.

People come up with excuses not to watch the video. They say, "It's too hard to watch." Or "My teens promise they don't need to watch a video; they say they have everything under control." Even if they tell you that, please watch this video anyway!

The video was created by AT&T to share stories of people who live with the aftermath of texting-related accidents. The video provides important lessons based on real-life situations, and it has been watched millions of times. As soon as I saw the video, I immediately wanted to share it with others. I think you will, too. You can find the video online by searching for *AT&T The Last Text Documentary*.

Hot Pets

I'd also like to remind everyone that as summer heats up, it's important to consider your pets. When people leave their dogs in the car, it can lead to tragic results.

Most people don't realize how quickly the temperature can rise inside a car. On a 90-degree day, the interior temperature of your car can reach more than 160 degrees in less than 10 minutes. At that heat, it only takes 15 minutes for your dog to sustain brain damage or even die from heatstroke, because dogs can only cool themselves by panting and sweating through their paws and nose—and they can't cool down when they're in an oven-like atmosphere.

As always, our mission at UPD is simple: to make Ukiah as safe as possible. If you have suggestions on how we can improve please feel free to call me. If you would like to know more about crime in your neighborhood, you can sign up for telephone, cell phone and email notifications by clicking the Nixle button on our website: www.ukiahpolice.com.
