Weekly Column – Hot Topic

Protect Your Furry Friends!

With summer in full swing and temperatures topping 100 degrees, this seemed like a good time to remind everyone about the dangers of leaving pets in cars. Did you know that even with an outside temperature as low as 72 degrees, a car's internal temperature will rocket to 116 degrees in only an hour? Imagine how hot it gets inside a car during these hot summer days. Cars are no place for pets.

Even in the shade, cars act like large ovens. Surprisingly, cracking your windows doesn't do much to slow the oven effect. The hotter it is outside (shade or not), the more quickly a car's internal temperatures can become devastating for a dog.

When people leave their dogs in the car, it can lead to tragic results. On a 90-degree day, in less than 10 minutes the interior temperature of your car can reach 160 degrees. At that heat, it only takes 15 minutes for your dog to sustain brain damage or even die from heatstroke, because dogs can only cool themselves by panting and sweating through their paws and nose—and they can't cool down fast enough when they're in an oven-like atmosphere.

If you find a dog in a car and you can't locate the owner, please call 911 before you try to break the car window yourself. When you call us, law enforcement dispatchers will be able to tell you how quickly someone can respond.

While you wait, it's always a good idea to let businesses near the parked car know about the dog in danger with a description of the car; people will often make a public announcement to help find the owner of a pet in distress.

Another danger to our furry friends, especially during the summer heat, is hot pavement.

Did you know that on a 77-degree day (for our friends on the coast), the temperature of asphalt can reach 125 degrees? At 86 degrees, the temperature of asphalt can reach 135 degrees.

When the asphalt reaches 125 degrees, it only takes 60 seconds for skin destruction to begin (for humans and our furry friends). Think about how much it hurts to run barefoot on hot pavement or asphalt. Well, dogs' paws burn too! Please remember that pavement surfaces absorb heat and we need to protect our pets.

Protect Your Furry Friends! (cont.)

Here are some tips to help you protect your pet's paws in the summer heat.

- Check the pavement for heat before taking your dog on a walk. Place your hand or a bare foot on the surface for 10 seconds. If it is too hot for you to keep your hand or foot on it, then it is too hot for your pet.
- Stay on grassy surfaces and avoid bare ground when outside in the summer heat.
- Avoid the hottest parts of the day. Walk early in the morning or late in the evening after the pavement has cooled down.
- Invest in a pair of dog booties to prevent the heat from burning your dog's paws.

Keep in mind that your dog's paws may be more susceptible to hot materials after swimming. If you see any signs in your dog such as limping, not wanting to walk, a red or pink color change in the paw pads, licking or chewing the feet, missing pieces of the pads or blisters, please take your dog to see the veterinarian.

All of us in law enforcement are passionate about animal safety and the penal code is clear: anyone who "tortures, torments, deprives of necessary sustenance, drink, or shelter, cruelly beats, or cruelly kills any animal" can be charged with a felony.

Please remember to safeguard your pets from the dangers of summer heat and call us if you witness animal cruelty; we want to do all we can to protect our furry friends.

As law enforcement professionals, our goal is to keep people as safe as possible. This column is written with that simple mission in mind. Chris Dewey works for the Mendocino County Sheriff's Office as the Professional Standards Bureau manager, and is the retired police chief for the Ukiah Police Department.
